**16. Get Support for your theme.....43**

# 1. Installing the Theme

You need to upload the theme files to your WordPress installation's wp-content/themes/ folder. Then go to your WordPress administration panel and activate the theme from the **Appearance > Themes** pane.

**DO NOT install it like** wp-content/themes/goodlife-wp/goodlife-wp

**DO install it like** wp-content/themes/goodlife-wp

If you want to install the theme by uploading the zip file, please make sure that you do not upload the zip file downloaded directly from Themeforest. The zip file you downloaded contains extra files such as documentation (one you are reading) and licensing. You should upload the zip file containing the WordPress files only.

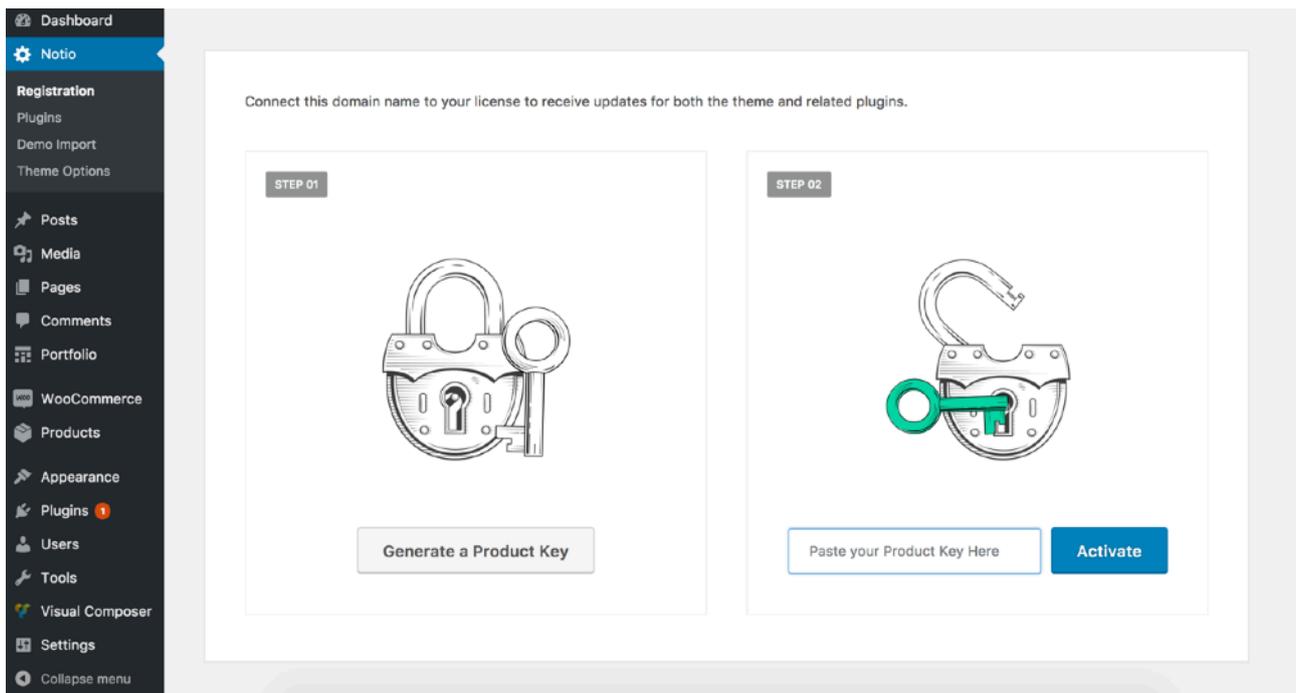

Once the theme is uploaded, you need to activate it. Go to **Appearance > Themes** and enable your chosen theme. Once you have enabled the theme, you need to make sure you have everything necessary to use it properly. To do this, please go to **Appearance > Install Plugins** to install the necessary plugins such as Visual Composer.

## Warning!

While installing your theme through wordpress admin, you may encounter an error message saying “are sure you want to do this?”. This is mainly due to your hosting php settings. The theme zip file is roughly around 6mb and in some hosting providers, the default value for **max\_upload\_limit** left default which is 2mb. To solve this problem you should either increase your maximum upload size (to 10mb) on your hosting admin panel or ask your host to do it for you if you do not have the privilege to alter your server php settings. This is a very common request and they should be able to help you out. Once the limit is increased you can re-try the install and you'll be all good to go.

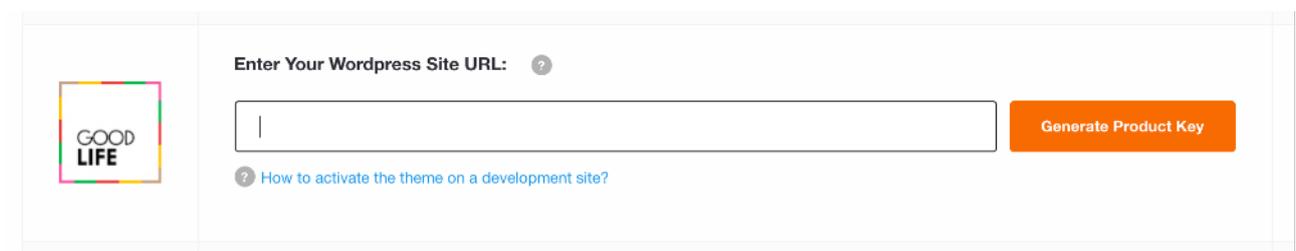

## 2. Register Your License

With Version 3.0 of GoodLife theme, we have introduced our in-house license management system. By registering your license, you can get **auto updates** for your theme and the bundled plugins such as Visual Composer.

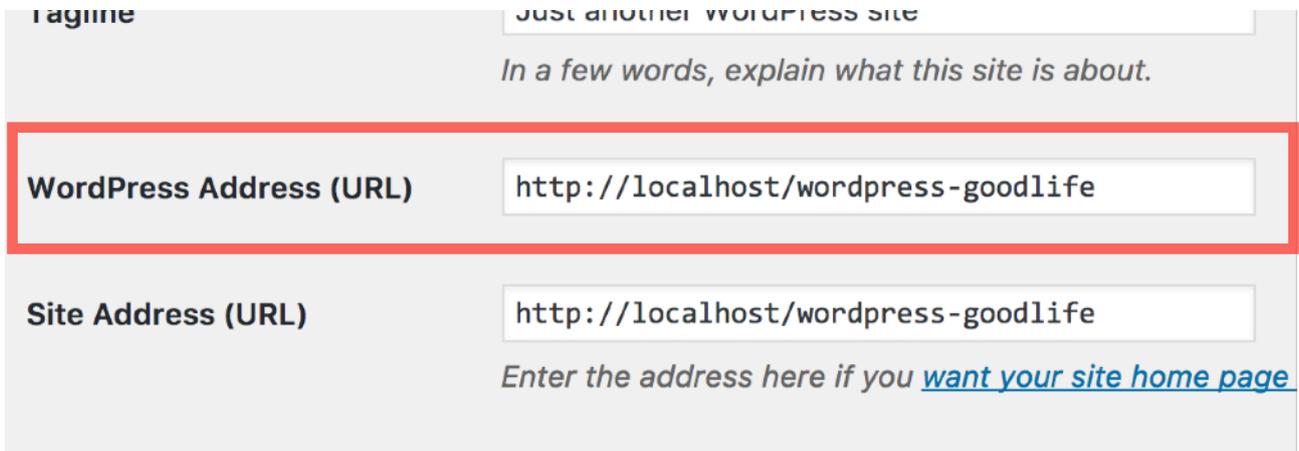

To do this, you need to login to our License Management system from: <https://my.fuelthemes.net/>

Once you login, you 'll see your purchases from Fuel Themes. You can now generate your **Product Key** by entering your domain and clicking on Generate Product Key.

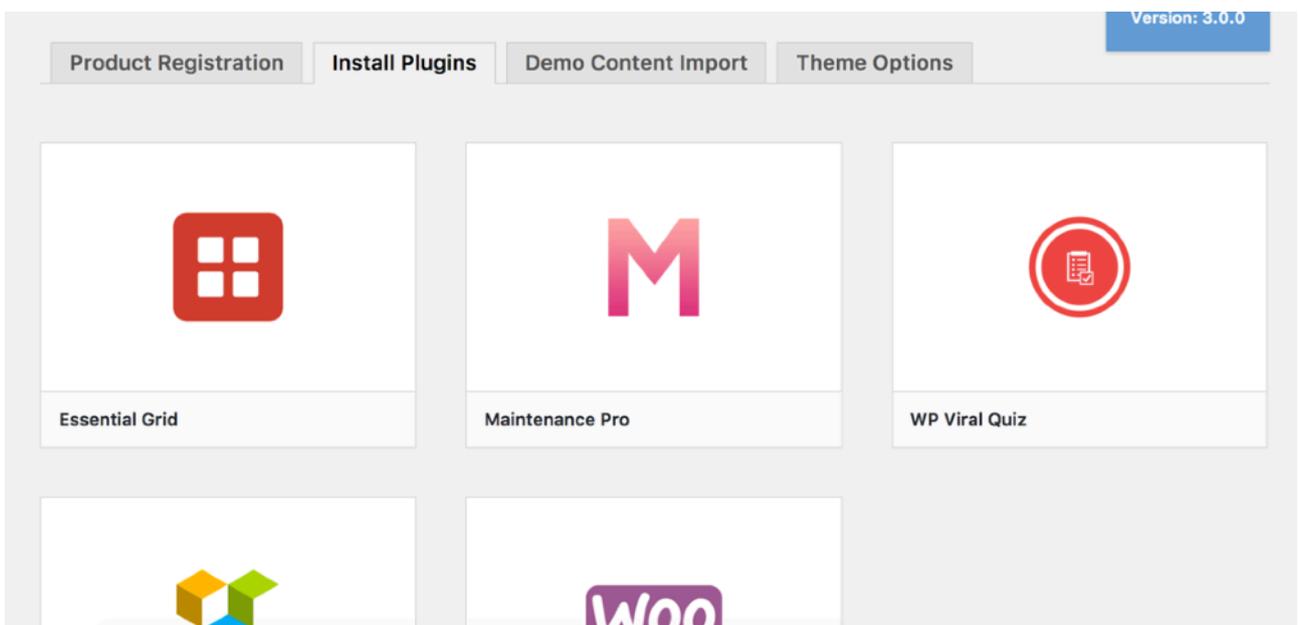

You can find your WordPress Site URL from the WP Admin > Settings > General:

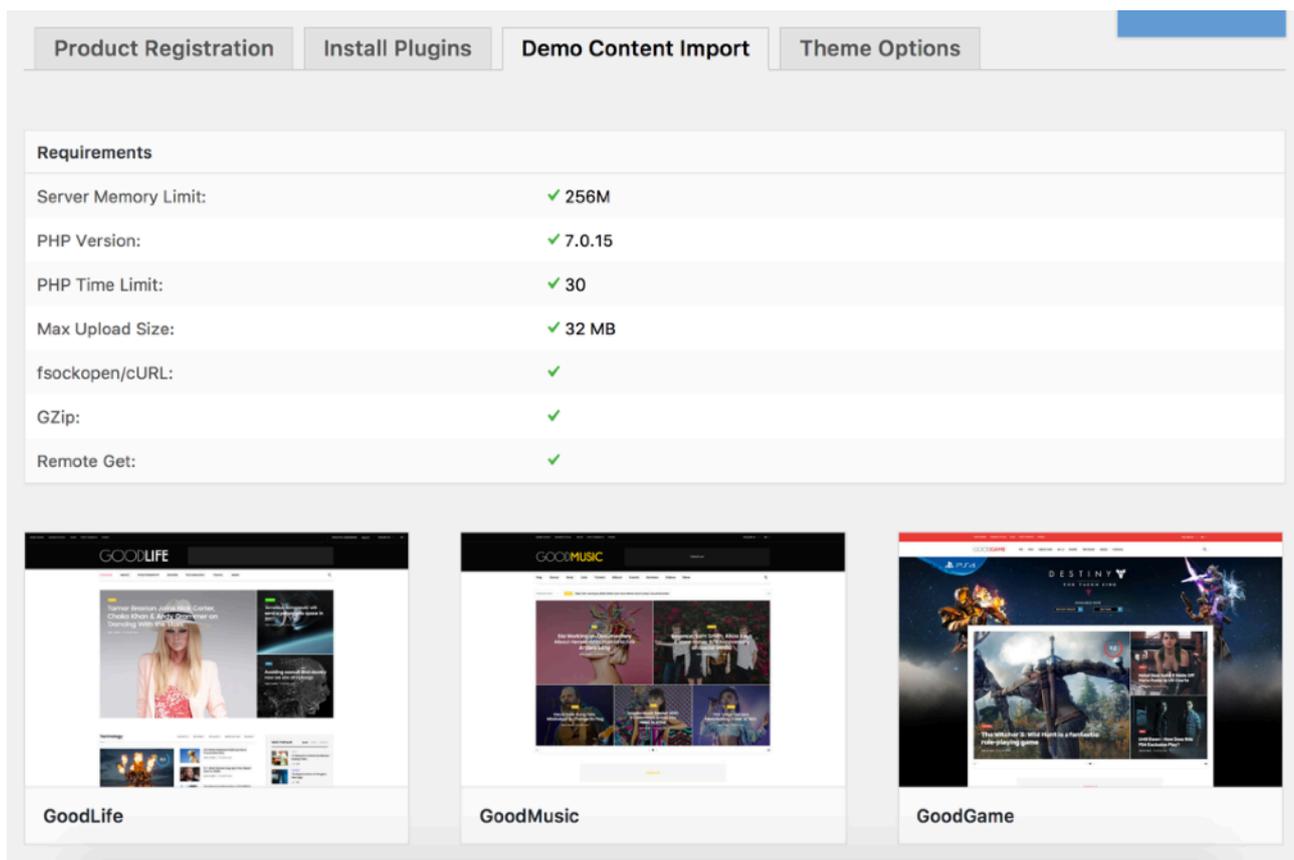

### 3. Install Required Plugins

Once you have finished your Product Registration, you can now install and activate the required plugins:

## 4. Importing Demo Content

Demo Content depends highly on your hosting settings, so please make sure that every requirement is met before trying to import the demo content.

The screenshot displays the 'Demo Content Import' section of a control panel. At the top, there are four tabs: 'Product Registration', 'Install Plugins', 'Demo Content Import' (which is active), and 'Theme Options'. Below the tabs is a 'Requirements' table with the following entries:

Requirements	Status
Server Memory Limit:	✓ 256M
PHP Version:	✓ 7.0.15
PHP Time Limit:	✓ 30
Max Upload Size:	✓ 32 MB
fsockopen/cURL:	✓
GZip:	✓
Remote Get:	✓

Below the requirements table, there are three preview cards for demo content:

- GoodLife**: A lifestyle-themed website with a woman's portrait and various articles.
- GoodMusic**: A music-themed website featuring album covers and artist information.
- GoodGame**: A gaming-themed website with a 'DESTINY' banner and game-related content.

Demo Content process might take seconds to several minutes depending on your hosting settings. Please be patient.

## **What if the Import fails or stalls?**

If the import stalls and fails to respond after a few minutes, or it fails with a simple error message like "Import failed," You are suffering from PHP configuration limits that are set too low to complete the process. You should contact your web host and ask them to increase those limits to a minimum as follows:

- max\_execution\_time 600
- memory\_limit 128M
- post\_max\_size 32M
- upload\_max\_filesize 32M

You can verify your PHP configuration limits by installing a simple plugin found here: <http://wordpress.org/extend/plugins/wordpress-php-info>. And you can also check your PHP error logs to see the exact error being returned.

## Import was successful, but my page does not look like your demo.

There could be couple of reasons to this, but I'll cover couple of most important ones. The main reason is you might need to re-select Visual Composer element settings, so that they reflect your own site's information:

### Posts Category Settings

**Display Category Title?**  
*If selected, the category title will be displayed on top*

**Style**  
Style 1  
*This changes the style of the posts*

**Post Categories**  
Entertainment  
*Which category would you like to show?*

**Offset**  
  
*You can offset your post with the number of posts entered in this setting*

The other might be that widgets are not added on your site. You can add widgets to your sidebars from **Appearance > Widgets** or edit the **Widgetised Sidebar** element on your page and select a new sidebar to show.

### Widgetised Sidebar Settings

**Widget title**  
*Enter text used as widget title (Note: located above content element).*

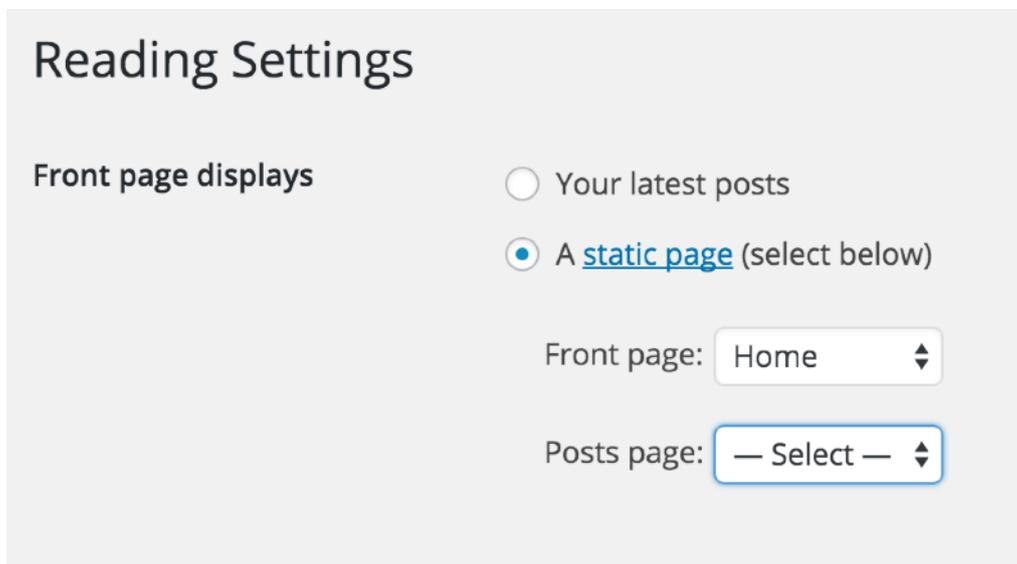

**Sidebar**  
Home - 1  
*Select widget area to display.*

**Extra class name**  
  
*Style particular content element differently - add a class name and refer to it in custom CSS.*

## 5. Setting up your front page

To set up your front page, you need to create two pages:

Create a page using the integrated Visual Composer and name it "Home"  
Then go to **Settings -> Reading** and click on "**A static page (select below)**" as shown:

Reading Settings

Front page displays

Your latest posts

A [static page](#) (select below)

Front page: Home ▾

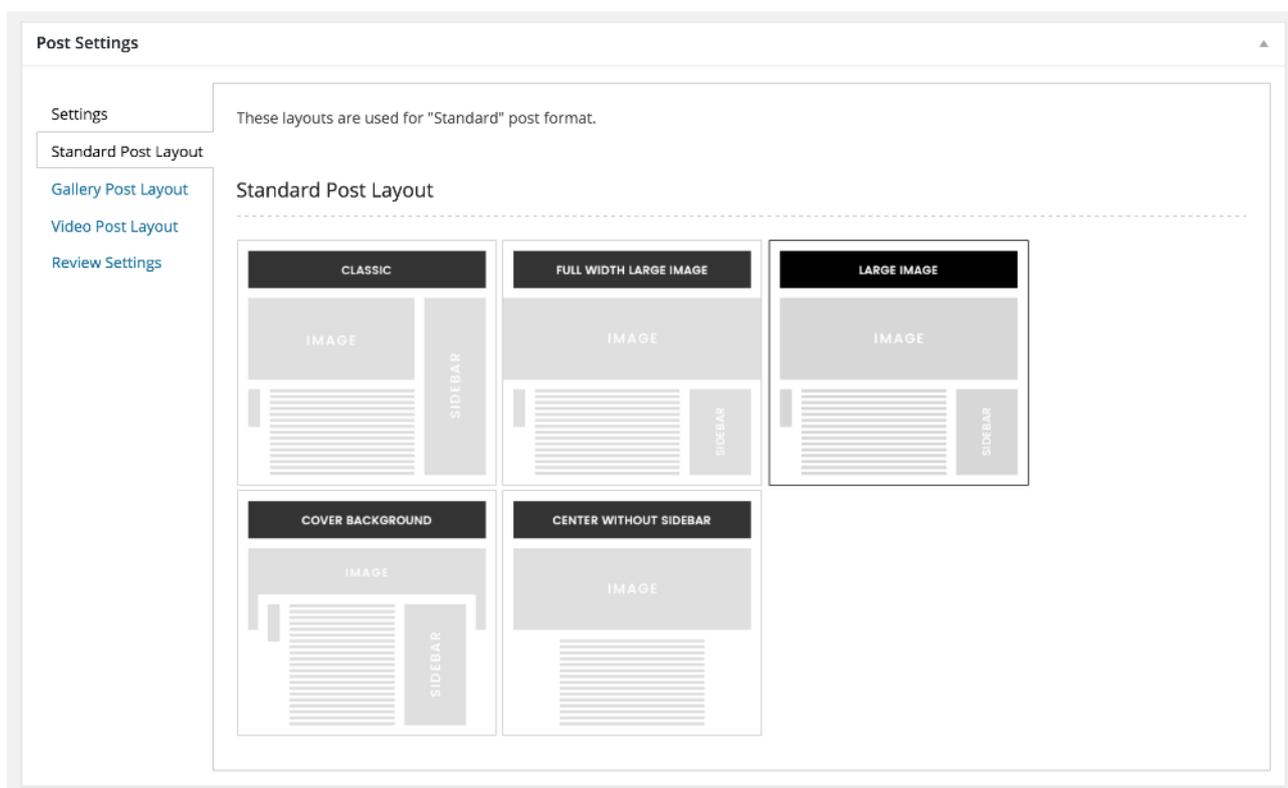

Posts page: — Select — ▾

## 6. Post Formats & Layouts

This theme comes bundled with the following post formats:

- **Standard:** A standard WordPress post. Upload a single image and set it as featured image
- **Gallery:** Upload multiple images inside the gallery metabox.
- **Video:** Paste URL of the video. Supported websites are here: <http://codex.wordpress.org/Embeds>

Each post format has its own settings and layouts that are selectable from **Post Settings** metabox below the editor. Below you can find the screenshots for each post format and each layout:

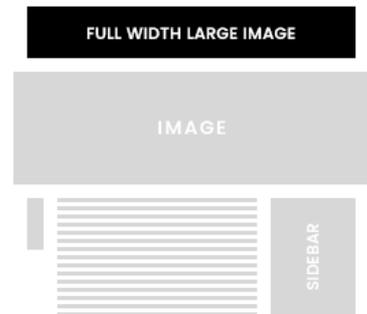

## Standard Post Format

**Style1:** Image on top with sidebar on the side.

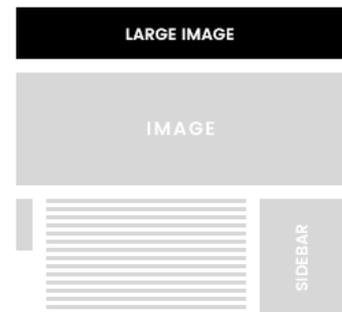

Example: <http://goodlife.fuelthemes.net/2015/10/08/tamar-braxton-joins-nick-carter-chaka-khan-andy-grammer-on-dancing-with-the-stars/>

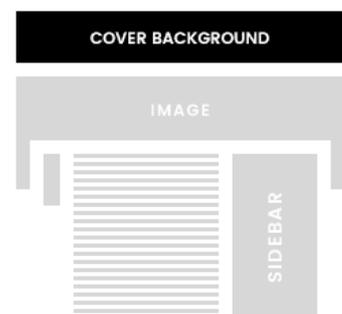

**Style2:** Full width image on top with sidebar on the side. Example: <http://goodlife.fuelthemes.net/2015/10/03/how-much-consciousness-does-an-octopus-have/>

**Style3:** Similar to Style 2, but the image is not full width. Example: <http://goodlife.fuelthemes.net/2015/10/08/amateur-astronauts-will-send-a-person-into-space-in-2017/>

**Style4:** Full width cover image on top. Example: <http://goodlife.fuelthemes.net/2015/10/04/avoiding-assault-and-slavery-now-we-are-all-cyborgs/>

**Style5:** Center large image, with centered content.

Example: <http://goodlife.fuelthemes.net/2015/10/05/in-the-original-star-wars-movies-r2-d2-was-no-more-advanced-than-sticking-kenny-baker-in-a-tin-can/>

## Gallery Post Format

**Style1:** Horizontal Images with sidebar on the side.

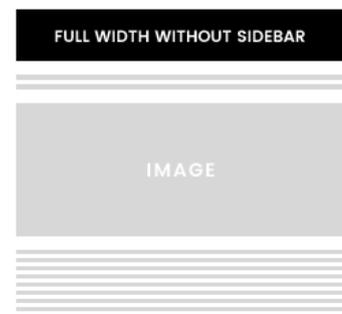

Example: <http://goodlife.fuelthemes.net/2015/10/09/38-reasons-to-cross-orkney-off-your-bucket-list/>

**Style2:** Vertical Images with vertically centered content with sidebar on the side. Example: <http://goodlife.fuelthemes.net/2015/10/06/heres-the-home-office-everyone-is-freaking-out-about-on-instagram/>

**Style3:** Full Width Horizontal Images without sidebar. Example: <http://goodlife.fuelthemes.net/2015/10/07/wedding-music-ideas-5-songs-for-your-first-dance/>

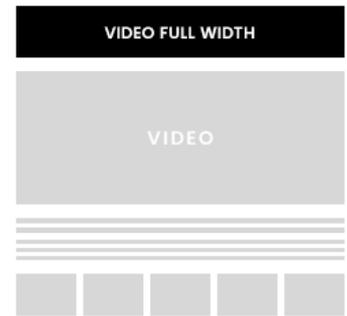

**Style4:** Vertical Images without any sidebar. Example: <http://goodlife.fuelthemes.net/2015/10/06/5-ways-to-wear-red-lipstick-like-a-french-girl/>

## Video Post Format

**Style1:** Full Width Video. Example: <http://goodlife.fuelthemes.net/2015/10/08/homeland-season-5-trailer/>

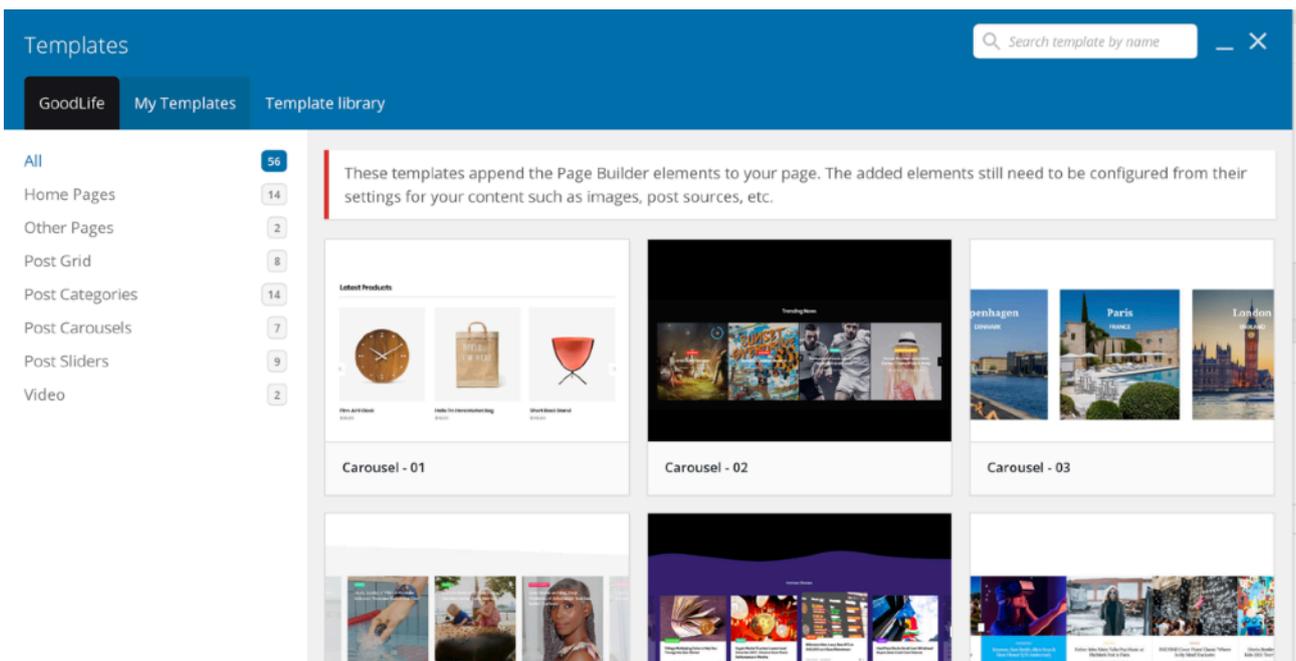

**Style2:** Half-width Video with content on the side. Example: <http://goodlife.fuelthemes.net/2015/10/08/google-santa-tracker-wheres-santa/>

# 7. Fuel Studio

Using Fuel Studio is pretty simple, it adds the elements, but does not import any images, so you would need to reconfigure the elements and add your images. It's great if you don't want to import whole demos.

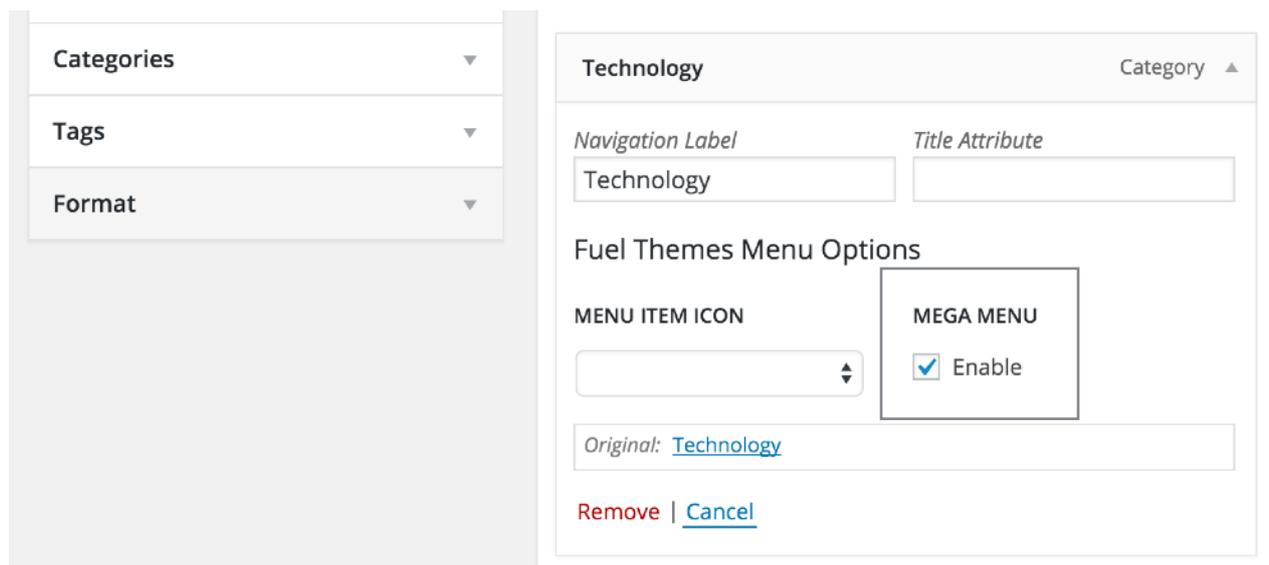

You can bring up Fuel Studio using the below button on WPBakery Page Builder:

## 8. Using the Mega Menu

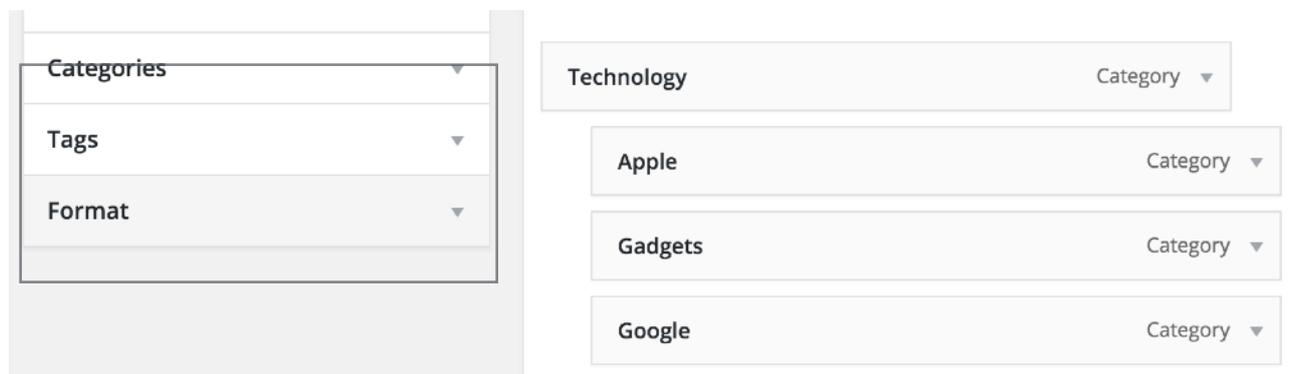

You can easily have mega menus on your main navigation using the Good Life theme.

To do that, you need to check the **"Mega Menu"** checkbox on the first-level menu element:

The screenshot shows a configuration panel for a menu item named 'Technology'. On the left, there are three dropdown menus: 'Categories', 'Tags', and 'Format'. The main panel for 'Technology' includes a 'Navigation Label' field with 'Technology' entered, and an empty 'Title Attribute' field. Below this is a section titled 'Fuel Themes Menu Options' containing a 'MENU ITEM ICON' dropdown and a 'MEGA MENU' checkbox which is checked and labeled 'Enable'. At the bottom, there is an 'Original:' field with a link to 'Technology' and 'Remove' and 'Cancel' buttons.

After that, every **Category, Tag, Format** type menu elements added under that menu item will be converted to display posts from that item:

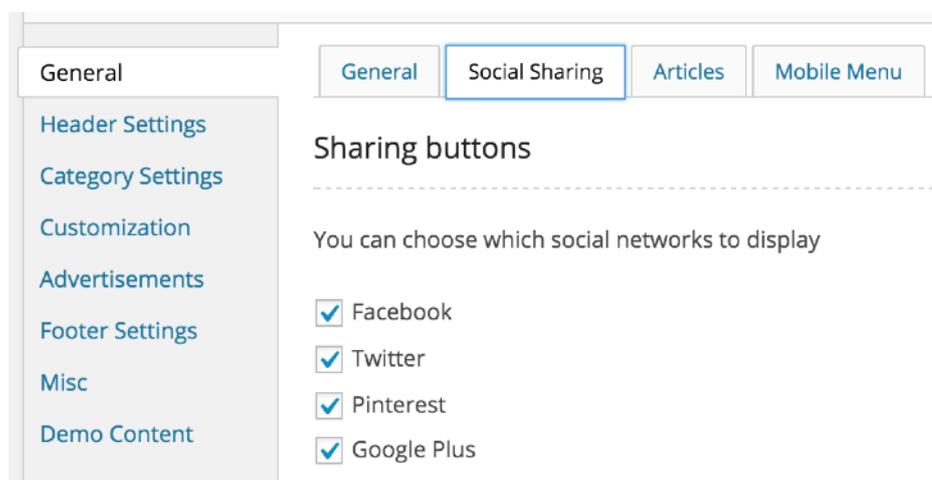

The screenshot shows the 'Technology' menu configuration panel with a list of sub-items. On the left, the 'Categories', 'Tags', and 'Format' dropdowns are visible. The main panel shows the 'Technology' menu item with a 'Category' dropdown. Below it, three sub-items are listed: 'Apple', 'Gadgets', and 'Google', each with its own 'Category' dropdown.

## 9. Social Media Integration

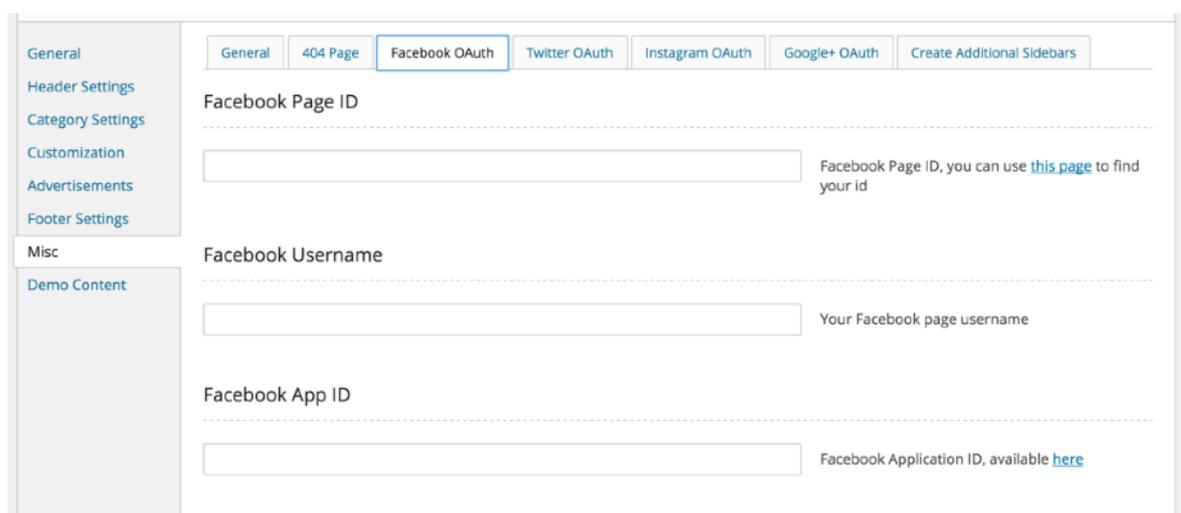

Social media is part of our lives and we love it! Our users love it and it's crucial to display which posts get the most attention on social media. To do that, you'll need the share counts. To select which social media sharing sites you would like to display and get counts from, please go to

**Appearance > Theme Options > General > Social Sharing** and make your selection.

The screenshot shows the 'Social Sharing' tab selected in the theme customizer. On the left is a sidebar menu with options: General, Header Settings, Category Settings, Customization, Advertisements, Footer Settings, Misc, and Demo Content. The main content area has tabs for General, Social Sharing, Articles, and Mobile Menu. Under the 'Social Sharing' tab, the heading is 'Sharing buttons'. Below it, the text reads 'You can choose which social networks to display'. There are four checked checkboxes: Facebook, Twitter, Pinterest, and Google Plus.

After that, you need to fill out the application details inside **Appearance > Theme Options > Misc**

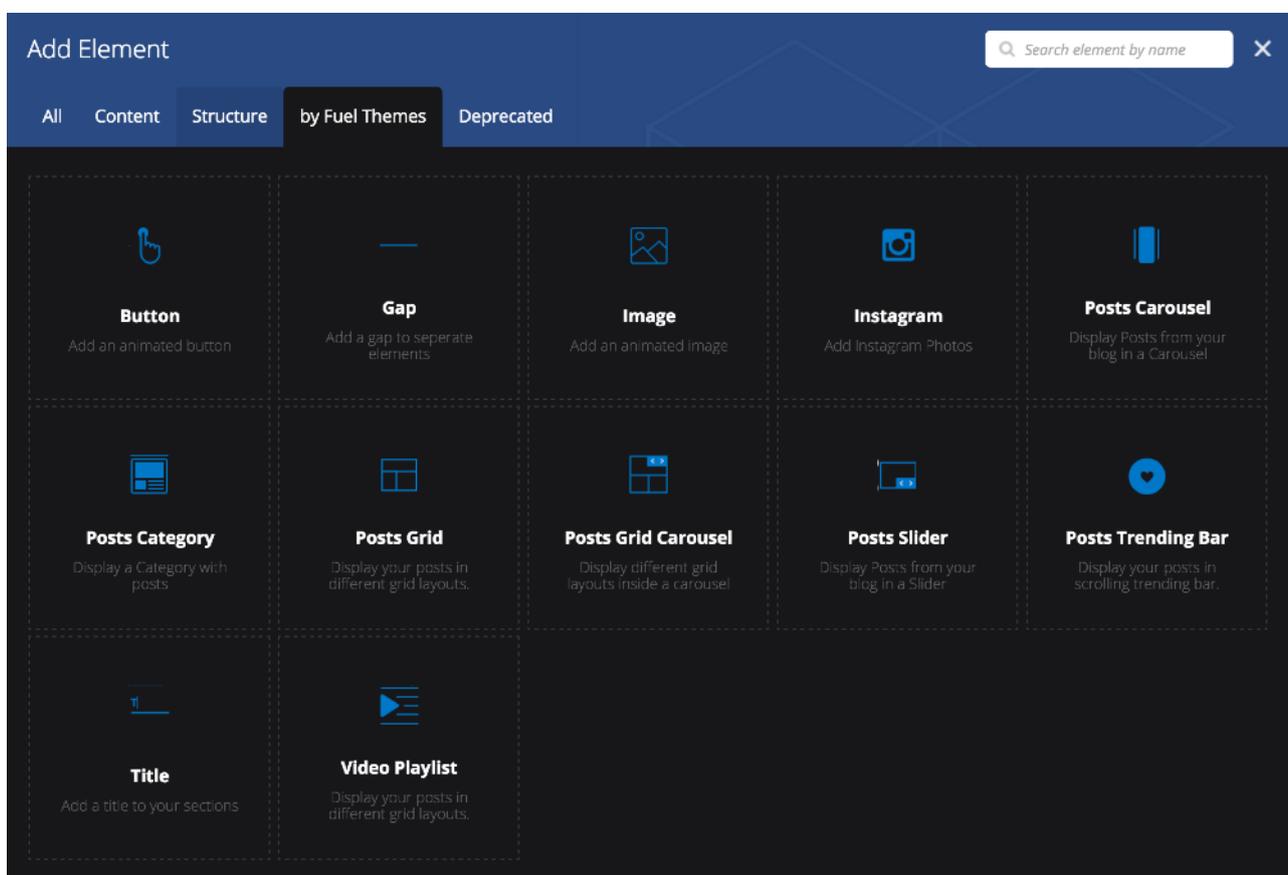

The screenshot shows the 'Facebook OAuth' tab selected in the theme customizer. The sidebar menu is the same as in the previous screenshot. The main content area has tabs for General, 404 Page, Facebook OAuth, Twitter OAuth, Instagram OAuth, Google+ OAuth, and Create Additional Sidebars. Under the 'Facebook OAuth' tab, there are three input fields: 'Facebook Page ID' with a note 'Facebook Page ID, you can use [this page](#) to find your id', 'Facebook Username' with a note 'Your Facebook page username', and 'Facebook App ID' with a note 'Facebook Application ID, available [here](#)'.

# 10. Using Visual Composer to construct your pages

To utilize this theme to the maximum, you need to get acquainted to using Visual Composer.

We have added custom Visual Composer Elements on top of the default ones to create unique layouts. You can find these extra elements under the **by Fuel Themes** tab inside Add Element window:

Most of the elements are self-explanatory, so we 'll go over the complex ones to get you started.

# Posts Category

Posts category element is the most used element in our demos. Basically, it allows you to show posts from a specific category. Below you can find the different styles with screenshots below them.

# 11. Creating Fixed sidebars using Visual Composer

Before we get started on using fixed sidebars, you need to create additional sidebars to be able to add them to your page. You can do this from **Appearance > Theme Options > Misc > Create Additional Sidebars**.

The logic behind fixed sidebars is that they scroll among the content height, so which ever column you add your **Widgetised Sidebar** element, should have the same height as its sibling columns:

The column containing the sidebar should have the same height as the left column.

To do that, please click on **Edit this row** button on the containing row and select **Equal-height Columns**.

Next step would be click **Edit** on **the Column containing the Widgetised Sidebar** element and check **Enable Fixed Content**.

Column Settings

General Design Options Responsive Options

Extra class name

sidebar

Style particular content element differently - add a class name and refer to it in custom CSS.

Enable Fixed Content

If you enable this, this column will be fixed. You must also enable 'Equal Height Columns' inside parent row settings.

Close Save changes

As you can also see from the above screenshot, we have added **sidebar class** to this column. The reason is we want to have more space between this column and the content column.

# 12. Using Page Skin Advertisements

Pageskin type advertisements are a great way to feature sponsors on your website. You can see an example of this on our Games demo: <http://goodlife.fuelthemes.net/games-demo/>. Pageskin is actually your website background, so you need to assign it from **Appearance > Background**

## 13. Translating Theme Phrases

This theme is localization ready, which means you can use localization tools to translate your theme. Please use one of the below tools to translate your theme. I personally prefer **Poedit**.

**Pootle:** An open source web-based translation system. The server hosted at Locamotion.org currently has WordPress translation enabled on it.

**Poedit:** An open source program for Windows, Mac OS X and UNIX/Linux which provides an easy-to-use GUI for editing PO files and generate MO files.

**GNU Gettext:** The official Gettext tools package contains command-line tools for creating POTs, manipulating POs, and generating MOs. "For those comfortable with a command shell"

The translation file is located in languages folder (**/inc/languages**). Edit the .po file using POEdit, use the translation field to make replacements.

From the file menu, save file with your language name e.g de\_DE.po. It will generate both a .po and .mo file for your translation.

Next edit wp-config.php located in the root folder of wordpress and define the WPLANG prefix with your language name which should be similar to the translation file name.

You can find more info on editing the wp-config.php and adding the WPLANG prefix here: [http://codex.wordpress.org/Editing\\_wp-config.php#Language\\_and\\_Language\\_Directory](http://codex.wordpress.org/Editing_wp-config.php#Language_and_Language_Directory)

# 14. Multi-Language Support Using WPML

To enable multi-language support, you need to purchase the WPML plugin. What WPML does is gives you the ability to add different translations of your posts, pages & products.

## **Getting started:**

<http://wpml.org/documentation/getting-started-guide/>

## **How to set and translate main features of the theme**

<http://wpml.org/documentation/translating-your-contents/using-the-translation-editor/>

## **Translation Management & Features**

<http://wpml.org/documentation/translating-your-contents/using-the-translation-editor/translation-management-features/>

## **Translating URL slugs**

# 15. Updating the theme

There are 2 methods to update our wordpress themes to newer version. These new updates are essential if you want to have a bug free website as we give new features and improvements to the theme over time. some of these updates might be needed in order to make the theme compatible with wordpress newer versions. there is no risk on losing your settings and pages. However if you have done modifications on core theme files, then they will be lost, so you should back up those files.

## Update Through Wordpress Admin Panel

- For this method you should first install **Theme Upgrades Tool** (<http://wordpress.org/plugins/easy-theme-and-plugin-upgrades/>)
- Unzip the file you just downloaded from ThemeForest and locate the WordPress Theme. (eg. goodlife-wp.zip)
- Log into your WordPress Dashboard.
- Click on **Appearance > Themes**. Still within the Themes section, on header tab, click on **Add New**, then on header second tab click **Upload Theme**.
- Click **Browse...** and locate the new theme file. (eg. goodlife-wp.zip)
- In the **Upgrade existing theme?** option choose **Yes** from the dropdown list.
- Click **Install Now"**
- Click **Activate**.

## Updating using a FTP software

- Login into your Themeforest account and go to downloads (Dashboard > Downloads)
- Download the theme into your computer
- Install an FTP program (Filezilla is free)
- Retrieve your FTP login information from your hosting admin panel and login into your hosting via FTP
- Unzip the item main file
- Locate **goodlife-wp.zip** and unzip it. make sure your unzipping software do not create extra directory with the same name nested into each other.
- Drag and drop theme main folder into your FTP program with the destination : **YOUR\_HOSTING\_ROOT/YOUR\_SUBDIRECTORY/wp-content/themes/**
- FTP program will give a warning that there is an existing with the same directory name, choose replace all.

Also, remember to clear your browser cache after each update if you notice anything off. Old theme files can persist in your local cache and make you think something's wrong.

## 16. Get Support for your theme

As per Envato rules, you get **6 months of free support** for your WordPress theme.

Support deals with installation of the theme, issues that arise from the usage of any features available by default, **BUG FIXES**, and **SMALL MODIFICATIONS** within one or two lines of code. We do not offer support for installation or administration of WordPress itself, nor do we provide support for any third party plugins, or problems associated with using them in a combination with one of our themes.

### **I have read the documentation and cannot find a solution to my problem**

If you are still having troubles, please use our support forum here: <http://fuelthemes.ticksy.com/>

### **I need Fuel Themes to install & setup the theme for me**

Please check out our [Professional Installation Service on Envato Studio](#)

### **I need complex customizations**

Please fill out the customization form on our website: <http://fuelthemes.net/theme-customization/>

We also partnered up with [WP Curve](#) for customers who need a professional regularly monitoring their WordPress website.

### **What is your recommended hosting for a hassle-free, fast website?**

WPEngine is absolutely phenomenal. They have the best support and our demos are hosted on their platform since we started. [Get 2 months free hosting with WP Engine on any shared annual plan](#)
